

## Wednesday Challenge Form

Group Members: Elisabeth, Jaden, and Me

Problem Statement: Build a tower as tall as possible using as many cards as you can. The score is a measure of how tall it is.

Approach: We started out with the idea of stacks of square bases going up as high as possible. Sadly, this idea did not work as expected, and our group split apart into working solo. In the end, we did not end up submitting a bridge, so we did not get a final score...

Solution: We did not win, but the group that did win, got a score of 13.5.

Lessons Learned: If I were to do this again, I would give myself more time and I would be more patient.
